

PROTECT YOUR NO.1 ASSET WITH SOLAGARD

Wattyl Solagard with Total Protection Technology™ protects your exterior surfaces from the harsh Australian climate.

THE AUSTRALIAN CLIMATE is one of the harshest in the world. No one understands the extremes of the Australian climate better than Wattyl Solagard. From the searing sun to intense humidity, your home's painted surfaces can crack, peel, blister and fade in no time at all. Wattyl Solagard's Total Protection Technology™ provides total protection against Australia's harsh weather.

Wattyl Solagard Total Protection Technology™

TOTAL PROTECTION AGAINST AUSTRALIA'S HARSH WEATHER

UV Block Out

Blocks out harmful UV rays preventing them from penetrating and damaging the surface.

Flexible - Resists Cracking & Peeling

Long term flexibility ensures the paint stretches and flexes with the extremes of climate to provide lasting protection against cracking and peeling.

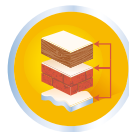

Stay Clean - UV Cross Link

Uses the power of the sun to form a protective layout making the paint surface tougher, reducing dirt adhesion, and keeping the surface cleaner for longer.

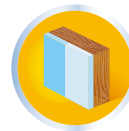

Breathable - Resists Blistering

Solagard resists blistering and surface damage by restricting penetration of water into the surface whilst allowing water vapour to pass through from the building material into the air.

Self Priming

No primer is needed on timber, cement render, brick, fibre cement, masonry, Zinalume® and galvanised iron sheet for faster and simpler painting.

100% Acrylic - Resists Chalking & Fading

High performance polymers and durable pigments provide resistance against chalking and colour fading in the extremes of sun and weather.

Inhibits Mould & Mildew

Contains powerful anti-mould ingredients to resist the growth of mould and fungus and protect the surface.

Made in Australia for Australian Conditions

Developed in Australia, Solagard is specifically engineered for easy application and lasting protection in Australian climates!
